

## PHASE I OF DEBRIS COLLECTION VOLUME = FOOTBALL FIELD STACKED 25' HIGH

The initial collection of hurricane debris along the public rights-of way in Weston ("Phase I" of debris collection) was completed on Sunday, October 1, 2017. Debris was collected from the front side of the berms of the public rights-of-way in the Indian Trace Development District; the initial City parks' cleanup; and the public rights-of-way, both the main and residential roadways, in the Bonaventure Development District (BDD). The BDD debris pick-up included some wood fences along with vegetative debris.

### Hurricane Irma Recovery Related Work Continues and Includes:

- Removal of hazardous limbs and branches from trees (called hangers and leaners) in the public right-of-way and public spaces. This will be a tedious and time-consuming effort for City tree contractors and will continue for several weeks.
- Bracing of viable downed trees.
- Debris cleanup of the back side of the berms.
- Stump grinding.

**Hurricane debris removed between September 16 and October 1, 2017**
